

MacBook Air 11" Mid 2012 Microphone Replacement

Replace a blown-out microphone in your Mid 2012 MacBook Air 11".

Written By: Andrew Optimus Goldberg

INTRODUCTION

Screaming at your MacBook Air might not hurt its feelings, but it could go deaf. Use this guide to replace a blown-out microphone.

TOOLS:

- [P5 Pentalobe Screwdriver Retina MacBook Pro and Air](#) (1)
- [Spudger](#) (1)
- [T5 Torx Screwdriver](#) (1)

PARTS:

- [MacBook Air 11" \(Mid 2012\) Microphone](#) (1)

Step 1 — Lower Case

- ❗ Shut down and close your computer. Lay it on a soft surface top-side down.
- Remove the following ten screws:
 - Two 8 mm 5-point Pentalobe screws
 - Eight 2.5 mm 5-point Pentalobe screws
- ❗ The special screwdriver needed to remove the 5-point Pentalobe screws can be found [here](#).

Step 2

- Wedge your fingers between the display and the lower case and pull upward to pop the lower case off the Air.

Step 3 — Battery

- Use the flat end of a spudger to pry both short sides of the battery connector upward to disconnect it from its socket on the logic board.
- Bend the battery cable slightly away from the logic board so the connector will not accidentally contact its socket.

Step 4

- Remove the following five screws securing the battery to the upper case:
 - Two 5.2 mm T5 Torx screws
 - One 6 mm T5 Torx screw
 - Two 2.6 mm T5 Torx screws

Step 5

 When handling the battery, avoid squeezing or touching the six exposed lithium polymer cells.

- Lift the battery from its edge nearest the logic board and remove it from the upper case.

Step 6 — Left Speaker

- Use the flat end of a spudger to pry the I/O board cable connector up off its socket on the I/O board.
- Bend the cable away from the I/O board.

Step 7

- Use the tip of a spudger to de-route the left speaker cable from the notch cut into the edge of the I/O board.

Step 8

- Use the flat end of a spudger to pry the left speaker connector up and out of its socket on the I/O board.
- ⓘ Make sure to pry upward from beneath the wires.

Step 9

- Use the flat end of a spudger to pry the left speaker off the adhesive securing it to the upper case.

⚠ Only pry up on the speaker from the areas of bare aluminum on the upper case. Prying up from the keyboard area may damage the keyboard and the speaker itself.

Step 10

- Remove the left speaker from the upper case.

Step 11 — Microphone

- Use the tip of a spudger to flip up the retaining flap on the microphone ribbon cable ZIF socket.

⚠ Be sure you are prying up on the hinged retaining flap, **not** the socket itself.

- Use the tip of a spudger to pull the microphone ribbon cable out of its socket.

Step 12

- Use the tip of a spudger to pry the microphone away from the side of the upper case.
- Remove the microphone from the upper case.

To reassemble your device, follow these instructions in reverse order.
